

Mohit Nilkute

A dedicated and an aspiring Software Development Engineer with an objective of working in an organization that provides opportunities for technical and personal advancement.

EXPERIENCE

- iNeuron.ai, Remote — Project Intern, Apr 2023 - July 2023**
- Designed and developed a scalable end to end **machine learning** pipeline using **MLOps**, and **CI/CD pipeline** for building and deploying the model on Heroku.
 - Hosted a website using flask as backend where we can download logs, artifacts, model file, make predictions and also retrain the model over website using dataset stored on **No-SQL** database.
 - Trained on multiple ML models for **Phishing** Domain Detection.

- Embedded Creative Design Solutions Pvt. Ltd., Nagpur — Project Intern, Jan 2022 – June 2022**
- Trained model for **Cotton Image Detection** and calculate its **distance and position** with respect to camera.
 - Programmed a Robotic Arm Manipulator of **3DOF** to pick n' place the cotton form the cotton plant.

- Regional Meteorological Centre, Nagpur — Data analyst, June 2021 - August 2021**
- Monitored current data and analyzed past **50+ years** weather data to create visual dashboards for Akola and Nagpur region using **Power BI**.

- Youth India Foundation, Remote — IT Director, Jan 2021 - April 2021**
- Managed a team of **12+** developers, content writers and UI/UX designers to create a website for an eLearning platform for poor children. Interviewed **25+ interns** for these roles.

PERSONAL PROJECTS

- Plant Village Disease Classification: Aug 2022 - Sept 2022**
- Trained a model for classifying diseases of Tomato, Potato, and Pepper Bell using **CNN** Sequential model with pretrained base like VGG.
 - Multi class classification problem with 2 classes of Pepper Bell, 3 classes of Potato, and 10 classes of Tomato diseases with a total of **17000+** leaf images.

- Cotton Segmentation and Distance Estimation: Jan 2022 – June 2022**
- Cotton contour extraction using **Image Segmentation** and then Distance Estimation of the cotton object from the camera.
 - Used Computer Vision and **Deep Learning techniques** for Image Segmentation and made a **real dataset** for Distance Estimation by manually collecting actual distances from the cotton.

- End-to-End Food Delivery Time Prediction: Mar 2023**
- The main goal of this project is to give an estimate of the time required for the delivery person to deliver food to respected location. This regression problem gave an **R2 Score of 82% using XGBoost Regressor**.
 - With the help of **MLOps** life cycle and CI/CD, deployed this **Flask API on AWS Beanstalk** for testing purpose.

- End-to-End Credit Card Fraud Detection: May 2023**
- The problem statement was to detect an account holder's fraud using his last 6-month financial statement. This classification problem gave an **Accuracy Score of 82% using Gradient Boost Classifier**.
 - Used **MLFlow**, And **DVC** for experiment tracking and data version control.

- Text Data Summarizer using HuggingFace Api: Aug 2023**
- This NLP project gives summarized form of text data provided.
 - Used HuggingFace pretrained model to train the model on text data.
 - Integrated on a website with Flask as a backend.

 Nagpur, Maharashtra, India

SKILLS

- Programming Languages:**
Python, C++, Java, JavaScript, SQL, NoSQL
- Frameworks:**
Scikit-Learn, TensorFlow, Keras, PyTorch, NLTK, Flask
- Databases & Data Visualization Tools:**
MySQL, MongoDB, PostgreSQL, Cassandra, Power BI, Tableau
- Data Science:**
EDA, Supervised and Unsupervised Learning Algorithms, CNN, RNN, NLP, Timeseries, Computer Vision, Hyperparameter Tuning
- Mathematics for ML & DL:**
Algebra, Descriptive Statistics, Inferential Statistics, Probability Distribution Functions, Hypothesis Testing, Calculus and Matrices.
- Big Data Tools:**
Apache Hadoop, Spark, Hive, HBase, Snowflake, Airflow
- MLOps Tools:**
MLFlow, DVC, AzureML, AWS Sagemaker, Auto ML, Eval ML
- Cloud Deployment & Containers:**
AWS, Azure, Docker, CircleCi, Jenkins
- Miscellaneous:**
Unix/Linux, Scripting, Git, HTML-CSS

PUBLICATIONS

- Pneumonia detection through Image Classification Using CNN — Research Paper, Aug 2022 – October 2022**
- Used **2000+ x-ray images** of Infected and Not Infected with Pneumonia.
 - Trained on many CNN Architectures like VGG19, Resnet50-V2, EfficientNetB0-B7, and also **customized CNN architecture**.
 - ijngc.perpetualinnovation.net/index.php/ijngc/article/view/931

EDUCATION

- Shri Ramdeobaba College of Engineering and Management, Nagpur — B.E. 2019-2023**
Electronics and Communication Engineering (ECE) – (CGPA-8.02)
- M. K. Umathe College, Nagpur — HSC 2017-2019**
Acquired 77.85% in 12th.
- Vimaltai Tidke Convent, Nagpur — SSC 2017**
Acquired 90.4% in 10th.

Position of Responsibility

- IT director in Youth India Foundation.
- Team leader in College Project for Autonomous Robotic Arm Cotton Plucker.
- Member of Technical Club, and Robotics Club.

LANGUAGES

- English
- Hindi
- Marathi

HOBBIES

- Reading Books
- Traveling
- Learning new technical advancements

SOFT SKILLS

- Problem solving
- Diplomatic
- Communication
- Collaboration
- Leadership
